

# Project Bonten

Eldad Milagros Khodjo Opare  
Marc-Étienne Ame Mawusse Sossou

Nongyin Sayinga Awindor  
Jerome Selorm Kwame Adedze

Web Technology 2025

# Background

- BONTEN is a **centralized digital platform** designed to **serve as a repository for events in Ghana**. The **platform curates, organizes, and promotes events across diverse categories**, including music festivals and conferences, cultural celebrations, and local experiences, ensuring that **users can easily discover activities that align with their interests**.
- The **platform addresses a key problem** faced by both audiences and organizers, **which is fragmented event information**. Currently, **events in Ghana are often promoted across various social media pages and messaging platforms**, resulting in **inconsistent and unreliable discovery**. **BONTEN solves this by putting event information into one centralized and user-friendly portal**, giving users instant access to verified and updated listings.

# Web Application Users

## Individual App User

For users, BONTEN offers a personalized event discovery experience, enabling them to explore upcoming events tailored to their preferences, location, and interests.

## Event Organizer

For event organizers and promoters, it serves as an efficient tool to reach a wider audience, manage event listings, and monitor engagement in real time.

# Web App Functionalities

## Personalized Event Discovery

Users can browse and filter events by interest, date, and location, while the system recommends activities tailored to their preferences.

## Ticketing System

The platform allows users to reserve and purchase event tickets securely using paystack integration, providing a seamless booking experience.

## Organizer Dashboard

Event organizers can register, upload event information, and manage all their event listings from a centralized dashboard.

## Rating & Review System

Users can rate events and leave reviews, helping others make informed decisions and providing feedback to event organizers.

# Architecture & Design

The **BONTEN** platform is built on a 3-tier architecture, ensuring a clear separation of concerns between the user interface, business logic, and data storage. This design utilizes a custom MVC-inspired framework to handle secure authentication, real-time data processing, and seamless third-party integrations.

## Presentation Layer

Static assets, CSS, JavaScript,  
HTML

## Application Layer

PHP, API endpoints

## Data Layer

MySQL

# Team Roles

## > Eldad Opare

Full-stack Developer  
Led the Design of the database, the vanilla html and css used and their styling, as well as the review and comments flows from history

## > Marc Etienne

Full-Stack Developer  
Led the choice of tools, payments, and hosting for launch success, building both the back and front of the app.

## > Jerome Adedze

Led UI/UX design from concept to final interface, designed core frontend layouts, and refined components with the frontend team.

## > Nongyin Awindor

Frontend Developer.  
Designed webpages following the designs from the Lead UI Developer
